

ACO Wildlife

Copperwood Schoolyard Habitat for Environmental Education Glendale, AZ

PROJECT PORTFOLIO

Product: Custom Fiberglass Tortoise Burrow/Walls (20'x25')

ACO Polymer Products, Inc., donated custom polymer concrete wildlife fencing and a custom fiberglass tortoise burrow to the Copperwood Schoolyard Habitat for Environmental Education Project.

The site includes an existing schoolyard habitat with native plants and a small pond. The adjacent site includes several outdoor classroom amenities and a new tortoise habitat. The habitat is surrounded by

a 20' x 25' enclosure/wall and will be visited by hundreds of students throughout the school year, as well as the community.

ACO's wildlife wall system is perfect for the enclosure as it provides a barrier under the ground as well as above. The polymer concrete material and rounded top edges of the wall are safe.
